Scenario Virtual Project Delivery to Release Revolutionary Project Data Integration and Access Software for the AEC Industry

January 28, 2011 - Anaheim, CA – Scenario Virtual Project Delivery™ (Scenario VPD), part of the KHS&S Group, announces the upcoming release of the Communication, Collaboration and Control (C3) software system for the AEC industry. This revolutionary system that allows building design and construction team members 24-7 access to live integrated project data will be released at the Winter 2011 BIMForum, Feb. 10 and 11, in San Diego, CA.

"Until now, The AEC industry's ability to realize the full potential of integrated project delivery has been limited by lack of software interoperability and easy access to key data among all members of the project team" says Roland Soohoo, general manager, Scenario VPD. "By putting all project data in one place within a common real-time platform, our C3 software system solves this problem, creating a flexible and seamless project information and management source."

The C3 system connects and allows real-time data access, collaboration and project management among project owners, architects, engineers, general contractors and subcontractors by utilizing a powerful, web-based central server where all project and BIM data are stored and aggregated. Building team members access data using a pull-down menu that automatically integrates within leading AEC software, such as Revit®, AutoCAD® 3D and Navisworks. Specific application capabilities include live project tracking, revision control, information routing and review of BIM and project documents.

Phil Cherne, Chief Operating Officer of KHS&S adds: "Scenario VPD technology is bringing a new paradigm to the industry by enabling project teams and companies to have timely, accurate information for improved visibility and efficiency. As part of the AEC industry we recognized the role that data management would have in the construction marketplace. The software was developed from experiences in the challenges of design, Big Room meetings and field communication."

As a Web-based system, C3 has the industry-leading capability to perform real-time BIM and trade coordination, including live clash management, whether team members are working at the same location or geographically dispersed. Team members can also work offline and upload changes when reconnecting to the Web.

C3 works on any PC with an Internet connection; no additional IT infrastructure is required.

To view a product demonstration, visit our booth at the BIMForum, Hard Rock Hotel, San Diego. To schedule a private demonstration during the forum, contact Bruce Holleran, director of marketing, at (714) 455-1150. For more information, visit www.scenariovpd.com.

About Scenario Virtual Project Delivery (Scenario VPD)

www.scenariovpd.com

Scenario VPD is an emerging leader in providing technology solutions for designing and constructing a wide range of complex building projects. Part of the KHS&S Group, Scenario VPD was formed through acquisition in 2008 and is based in Anaheim, California.

About KHS&S

www.khss.com

KHS&S is an international design-assist specialty building company that creates interiors, exteriors, themed environments, rockwork, water features and specialty finishes for some of the world's most recognized projects. KHS&S combines artistry with BIM and virtual project delivery to develop innovative building methods to streamline schedules and add value to large-scale commercial projects around the globe. The company operates in more than 20 cities throughout North America, Asia and the Middle East.
